

**Erik Parens** is a Senior Research Scholar at The Hastings Center, a bioethics research institute in Garrison, NY. He has led research projects on diverse issues, including the disability community critique of prenatal genetic testing, the use of surgery to normalize the appearance of children with atypical anatomies, and on the prospect of using genomics to make predictions about complex behavioral and social outcomes. Most pertinent to this event, he is the author of *Shaping Our Selves: On Technology, Flourishing, and a Habit of Thinking* (2015) and is an editor of *Human Flourishing in an Age of Gene Editing* (2019).
